

## **Mark Scharenbroich's AV & Room set-up:**

Please provide a cordless, hand-held microphone (not a lavalier). A back-up microphone with fresh batteries is also recommended.

Provide a black music stand with 10 sheets of blank paper. If you have problems securing a music stand, please call our office for suggestions.

I will not need PowerPoint capability.

The best room arrangement for my presentation is with the audience seated in theater style. A second option is classroom style. The third option is round tables. Position the first row no more than 10 feet from the stage.

The ideal stage/riser height for audiences of up to 200 people is 6 to 12 inches; for audiences of more than 200 people, 1 to 2 feet is appropriate.

The house lights should be turned up full—and for the best impact, use stage lights. I create a lot of characters with facial expressions and the audience needs to see me fully lit.

The audience will always respond better in a room that is comfortable or a bit cooler versus a room that is too warm.
