

## **Robin Benincasa's AV & Room Requirements**

Robyn requires the following equipment to be provided:

- Wireless Lavalier Microphone hooked into the sound system
- LCD Projector
- Large Screen – as large as the room will allow
- Audio/Sound with Sound Patch to presenter's laptop (embedded videos are played during keynote)

**SOUND CHECK:** Robyn requires a 5 to 10 minute sound check. Sound checks should occur no earlier than two (2) hours in advance of presentation time.

Robyn does not require a rehearsal. Her operator will plug his Mac Air into the house system and test the microphone levels and lighting.

**NO PRESENTATION SLIDES IN ADVANCE:** Robyn is unable to provide her presentation in advance, due to the usage rights on the video embedded in her presentation. NOTE: it is not possible to run the slides from another machine.

**SLIDES AND VIDEO:** Robyn's presentation includes both images and video, all embedded into a Keynote deck that her operator runs from his Mac Air.

### **ROBYN'S TECHNICAL OPERATOR:**

- A technical operator accompanies Robyn to each event; he runs her Keynote presentation from his Mac Air.\*
- The operator brings the Mac adapters and a back-up Mac for the presentation & videos.\*\*
- The Operator can be located at the back of the room or backstage. A direct sight line with Robyn is appreciated but he can be situated backstage if necessary.
- There are no additional costs to the customer for Robyn's operator.

\* The Operator brings two Macs (one for backup) that are "sterile"; they have never been connected to the Internet and have nothing on them other than her presentation.

\*\* Robyn's Technical Operator brings a VGA, HDMI and DVI dongles for his Mac Air
