

Brittany Hodak A/V Requirements

Brittany will run her presentation from Mentimeter, a web-based presentation platform that allows for real-time audience participation. All you'll need is an internet connection (hardwired is preferred, but not required).

The Mentimeter slides can be run full-screen from any web browser on your house computer. Brittany will advance the slides from the stage using the client's advancer/clicker (many event planners have the PerfectCue advancer, which works great).

The slides do not contain audio or video. Brittany can send a collaboration link to the Mentimeter presentation one week before the event, or a mock one sooner if your AV team requires. Scroll down to see what Mentimeter looks like, and download this Mentimeter FAQ to share with your AV team.

Brittany prefers a confidence monitor on stage if possible. Her preferred microphone options are countryman or lavalier.
